Reviewer's report

Title: Implementation Challenges and Successes of a Population-based Colorectal Cancer Screening Program: A Qualitative Study of Stakeholder Perspectives

Version: 1 Date: 11 October 2014

Reviewer: siwan thomas-gibson

Reviewer's report:

This is an interesting manuscript which is well written.
I think patients/screenees should have been interviewed and this would have added strength.
I think there should be more exploration/discussion as to why the stakeholders (or authors) think there are barriers to uptake of colonoscopy.
From a UK perspective it is very puzzling that the standard of care for colonoscopy still involves an anaesthetist and proposal anaesthetic.
There are several minor grammatical errors which a good proof reader should spot.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
