Reviewer’s report

Title: Three dimensional reconstructions of Lenke 1A Curves

Version: 1 Date: 01 Dec 2017

Reviewer: Toru Maruyama

Reviewer's report:

1) In the response, the authors said "we did not use bending radiographs to determine whether the upper curve was structural or not. We use clinical examination for that, by measuring the upper bump in standing position and comparing it to the one measured in ventral decubitus: if the upper bump disappears in lying position, it means that the curve is not structural".

This should be clearly described in the method section.

bump - hump?

2) Line 174: In my opinion, that the first objective with the brace will be to reduce plane rotation, and finally to decrease Cobb angles on regional planes, not to reduce the number of planes.
