Reviewer’s report

Title: Correction of Aortic Coarctation in a Girl with severe PHACE Syndrome

Version: 4 Date: 12 August 2014

Reviewer: Christian Schreiber

Reviewer’s report:

Even though the authors have tried to improve the manuscript, I am still concerned about the surgical content (and therefore message to readers). The solution found is probably not lasting throughout the life time of the patient. An arch plasty would serve for that purpose though. Indeed, it is technically challenging, but this is a commonly used approach in many centers nowadays. The authors might include references & discuss this issue further. Apart from that the manuscript is fine.

Level of interest: An article of importance in its field
