Reviewer’s report

Title: Effectiveness of anticoagulant therapy in the treatment of post-TAVI bioprosthetic thrombosis

Version: 2 Date: 17 January 2015

Reviewer: Dominique Himbert

Reviewer’s report:

Overall, the comments have been taken into account and the text changed accordingly. However, the quality of written English should be further improved before publication (i.e., anti-vitamine K (AVK) should be replaced by vitamine K antagonist (VKA), antiplatelet aggregation by antiplatelet therapy, evolution by outcome,...)

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Declaration of competing interests:
