Reviewer’s report

Title: Case Report: Endovascular Treatment of Aortic Pseudo-aneurysm Caused by Aortoesophageal Fistula

Version: 2 Date: 3 March 2015

Reviewer: Daniela Mazzaccaro

Reviewer’s report:

major compulsory revisions:
1. please rewrite the discussion in a more discursive way and not in the form of a bulleted list.
2. what about the treatment of the oesophageal lesion? you mentioned that the APA was caused by aorto-oesophageal fistula, so not only aortic disease.
3. how long was the follow-up time?
4. in your discussion you did not mention one of the most important complication which can occur after this kind of treatment, such as the risk of developing graft infection and a new aorto-oesophageal fistula. What do you think about this? Do you consider the endovascular treatment as the definitive solution or as a bridge solution? Please discuss.
5. you mentioned that you chose a 30-200 mm endograft, which implicates the coverage of a long segment of the descending aorta. Did you use any kind of spinal cord protection during the operation?

Minor essential revisions

A careful revision of the english language is necessary throughout the text. Minor spelling errors must be corrected: for example pseudoaneurysm instead of pseudoaneurysme, aorta instead of arota (introduction, line 3)

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited
