Reviewer's report

Title: Hepatopulmonary Fistula: a life threatening complication of Hydatid Disease

Version: 2 Date: 5 April 2015

Reviewer: Huseyin Altug Cakmak

Reviewer's report:

- This case report is about the hepatopulmonary fistula which can be seen as a complication of hydatid disease.

The authors should indicate the similarities and differences of their case with other cases in the literature. What are their unique features?

The complete blood counts and biochemical laboratory values should be given.

The echocardiographic and electrocardiographic findings should be given (Mass in the ventricle or atrium, subaortic membrane etc..)

The alternative treatment options should be discussed more detail in the discussion part of the manuscript.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published
