Reviewer’s report

**Title:** Successful surgical management of a rare esophageal inflammatory myofibroblastic tumour: a case report

**Version:** 3 **Date:** 23 July 2015

**Reviewer:** Philip Katzman

**Reviewer’s report:**

The authors corrected grammatical issues. However Figure 6 still does not do justice to the pathology of this tumor.

Major Compulsory Revisions

Either delete Figure 6 and just describe the histology in the text or find a pathologist who will provide adequate photomicrographs of the tumor with an appropriate legend. Just saying that there are plasma cells in the tumor is inadequate.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Declaration of competing interests:**
