Major revisions

1. Sternal chondromyxoid fibroma is quite uncommon, however this histology has been reported by several authors in literature;

2. The authors concluded that the plating system they used is not suitable for reconstruction of such chest wall defect. Why? Did the authors perform a statistical analysis comparing different reconstructive strategies in a cohort of patients? This manuscript analyzed one case only reporting the surgical management of a late complication;

3. The English language is poor. I suggest an extensive language revision by a native speaker.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited
