Reviewer’s report

Title: The Effect of Preoperative Liver Dysfunction on Cardiac Surgery Outcomes

Version: 0 Date: 23 May 2017

Reviewer: Nirav Patel

Reviewer's report:

This a well written article which concludes that patients with Liver dysfunction have higher morbidity and mortality in patients undergoing CABG and VS. Propensity matched data from national inpatient sample supports the conclusions. I think you should add details of variables used to perform propensity matching. Can you identify any of the CABG patients who had off pump CABG. If possible can you get details of severity of LD in these patients so you can determine which patients have worst outcomes.
