Title: Concomitant aorto-right subclavian artery bypass with off-pump coronary artery bypass grafting: a case report

Version: 0 Date: 26 Jul 2017

Reviewer: Marios Patronis

Reviewer's report:

Congratulations for your work!

I confess that cases like yours are challenging and most surgeons are not familiar to deal with. Nevertheless I think that the presentation needs some minor revisions in order to be published.

I do have the following comments:

1) I believe you have to clarify the patency and flow status of the vertebral and carotid artery pre-operatively.

2) Where is the location of the stenotic lesions in relation with the origin of the vertebral artery and the carotid artery?

3) How do you expect to improve the brain perfusion after the aorto-subclavian by pass and subsequently to reduce the risk of stroke?

4) Off pump CABG is claiming reduced risk of stroke mostly if you don't touch aorta.

Kind Regards,

Marios
