Title: Refractory ventricular fibrillations after surgical repair of atrial septal defects in a patient with CACNA1C gene mutations - Case report

Version: 0 Date: 24 Oct 2017

Reviewer: SC Nicolson

Reviewer's report:

The authors present a case of an adult with unrepaired CHD who had RBBB on preoperative EKG and a family history of rhythm disturbances on medications (the nature of which was not elucidated, nor was the treatment). The authors point out the importance of thorough investigation of both preoperative EKG findings and family medical history.

Minor Issue:

1. The authors might expand on how the patient's perioperative management would have changed if the diagnosis of long QT syndrome was made preoperatively
