Reviewer’s report

Title: Modified double patch repair with infarct exclusion technique for ventricular septal perforation: A case study

Version: 0 Date: 20 Nov 2017

Reviewer: Afzal Zaidi

Reviewer's report:

Post infarct VSD is a rare emergency these days, but one which all Cardiac Surgeons should be equipped to deal with. Residual shunt after repair invariably leads to poor outcome. The authors demonstrate two cases of post MI VSD repair using a double sandwich technique with excellent outcome. The illustrations are clear and the description easy to follow.
