Reviewer’s report

Title: Use veno-venous extra corporeal membrane oxygenation in elderly patients with post-cardiotomy hypoxia: the changing paradigm of respiratory support in adult respiratory distress syndrome

Version: 0 Date: 13 Jul 2018

Reviewer: Harikrishna Doshi

Reviewer's report:

The article describes a very pertinent point about 'age limit' before embarking on journey of MCS for such sick patients. It highlights once again that good outcomes are possible. It is perhaps not an easy task and needs intense coordination between surgical and intensive care team.

The team must be complemented on an excellent outcome for what looked like a grave situation.

Level of interest
Please indicate how interesting you found the manuscript:

An article of importance in its field

Quality of written English
Please indicate the quality of language in the manuscript:
