Reviewer's report

Title: Total Aortic Arch Replacement Surgery with a Core Temperature of 34°C

Version: 0 Date: 14 Aug 2019

Reviewer: Eduardo Rocha

Reviewer's report:

The article is interesting but due to the small sample, no conclusions can be drawn about the author's technical proposal. Four cases do not allow analysis. We may be facing a great technique or the patients surviving by chance. It would be interesting to have inflammatory markers and compare them with the proposed and already established techniques. I believe that for publication a larger sample should be studied comparing with established techniques. In addition, the article must have the ethical requirements and authorization of patients to participate in the study.
