Title: Thoracoscopic partial lung resection following pneumonectomy: A report of three cases

Version: 0 Date: 28 Jul 2019

Reviewer: Takashi Ohtsuka

Reviewer's report:

The authors reported three cases of successful wedge resection of the lung after contralateral pneumonectomy. Intermittent manual ventilation was used for two patients, and selective bronchial blocker was used for one patient.

However, the techniques in the current paper have been addressed in prior publications (Ann Thorac Surg 2015;99:1422-1425, European Journal of Cardio-Thorac Surg 2004;25:456-459). While I appreciate the effort of this paper, in my view, this manuscript is not suitable for the publication in Journal of Cardiothoracic Surgery.
