Reviewer’s report

Title: Excessive intravenous crystalloid infusion after video-assisted thoracoscopic surgery lobectomy is associated with postoperative pneumonia

Version: 0 Date: 11 Jun 2019

Reviewer: Giuseppe Marulli

Reviewer’s report:

Interesting paper that analyzes the risk factors for postoperative pneumonia after vats lobectomy. The rate of POP is relatively high probably due to the criteria used for definition. Among factors that are important crystalloid infusion is the most strange and the authors really do not explain the reasons why this factor should be a risk factor. A specific comment should be added in the discussion.
