Reviewer’s report

Title: An In-vitro evaluation of the flow haemodynamic performance of Gore-Tex extracardiac conduits for univentricular circulation

Version: 0 Date: 11 May 2020

Reviewer: Fernando Moraes

Reviewer's report:

This manuscript raises concerns about the performance of the flow dynamics after the "Fontan procedures". The importance of reducing the energy loss may have an impact in the outcomes of the patients, although its was not discussed in this paper. Not necessary. As it is a basic search and is well described in all the stages with pictures and methodology proper used I have nothing to add and would like to congratulate the authors.

Level of interest
Please indicate how interesting you found the manuscript:

An article whose findings are important to those with closely related research interests

Quality of written English
Please indicate the quality of language in the manuscript:
