Reviewer’s report

Title: A meta-analysis of perventricular device closure of doubly committed subarterial ventricular septal defects

Version: 0 Date: 14 Nov 2019

Reviewer: Nazmul Hosain

Reviewer's report:

The article is interesting, but I have following observations:

1. In page 9 under results section 15 studies have been mentioned, but elsewhere in the article 9 articles are mentioned. Plz clarify this issue.

2. In page 10 'The pooled rate of follow-up residual shunting was 0.000 (95% CI: -0.001-0.001, I2=0.0%,P=0.513).', plz explain.

3. In page 18 'The success rate was stable regarding the publication year' This statement was not clear to me, plz explain.

4. The discussion section appears a bit complex, plz consider rewriting to it for making it easily understandable for common surgical readers.
