Reviewer’s report

Title: Surgical treatment of mild to moderately dilated ascending aorta in bicuspid aortic valve aortopathy: The art of safety and simplicity

Version: 0 Date: 13 Oct 2019

Reviewer: Eduardo Rocha

Reviewer's report:

The article addresses an interesting topic. Cases of aneurysms near the limit of the surgical indication are really a dilemma for the cardiac surgeon. The option of a simple surgery, such as wrapping, that does not need to be in cardiopulmonary bypass is a good technical option. Knowing the long-term result of enveloping, showing similar results between techniques, can increase the indication of enveloping technique. I missed the ethical considerations in the text.
