Reviewer's report

Title: Effects of inhaled nitric oxide for postoperative hypoxemia in acute type A aortic dissection: A retrospective observational study

Version: 0 Date: 18 Nov 2019

Reviewer: Eduardo Rocha

Reviewer's report:

The article is very interesting. Since they are patients with longer hospitalizations than usual cardiac surgery patients, any intervention that may decrease the permanence is welcome. Other studies should be performed to see other positive effects and side effects of nitric oxide mainly in vavular patients.
