Reviewer’s report

Title: The Role of the Fractional Flow Reserve in the Coronary Steal Phenomenon Evaluation Caused by the Coronary-Pulmonary Fistulas: Case Report and Review of the Literature

Version: 0 Date: 02 Dec 2019

Reviewer: Carl Tommaso

Reviewer's report:

This is a very interesting case, and nicley performed procedure and literature review.

It should be mentioned that FFR is measuring pressure gradients and not flow, and as such pressure is a surrogate for flow. It would be very instructive if pulmonary artery pressures were measured during adenosine administration

Level of interest

Please indicate how interesting you found the manuscript:

An article of importance in its field

Quality of written English

Please indicate the quality of language in the manuscript:

Needs some language corrections before being published

Declaration of competing interests

Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?
6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I declare that I have no competing interests
