Reviewer’s report

Title: Dynamic navicular motion measured using a stretch sensor is different between walking and running, and between over-ground and treadmill conditions

Version: 3
Date: 5 January 2015

Reviewer: Ian Mathieson

Reviewer’s report:

I would like to thank the authors for their considered responses to the comments provided. Explanations and clarifications are on the whole clear, and the paper adds to the on-going debate regarding the assessment of foot motion. I look forward to further work being produced on the validity and reliability of the technology, so that its role can be further elucidated.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
