Reviewer’s report

Title: Quantitative evaluation method for clarifying ankle plantar flexion angles using anterior drawer and inversion stress tests: a cross-sectional study

Version: 0 Date: 26 Feb 2019

Reviewer: Simon Otter

Reviewer's report:

This is a well written manuscript which raises points of importance for a range of professionals.

The abstract is clear and the introduction covers the main points.

In the method, the demographic details (page 5) would be better placed in a table, for ease of reading. Otherwise this section is clear and well-laid out.

Results are clear - authors may wish to add a p value to statements (p 8) where there are significant differences, particularly if there is a very high (or quite low) level of significance.

The discussion compares the work well with the literature and the conclusion is supported by the data.
