Reviewer's report

Title: Tumour spectrum in non-BRCA hereditary breast cancer families in Sweden

Version: 1 Date: 12 April 2015

Reviewer: Steven Narod

Reviewer's report:

interesting paper although not very convincing

should list detailed limitationss and stress that if the risk of cancer
is higher in the relatives than in the general population it may not be appropriate
to compare proportions esp if observed proportion is low.

i.e rate could be the same but proportion wil be low because of increase in risk
at other sites

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
