Reviewer's report

Title: Cumulative BRCA mutation analysis in Greek population confirms that homogenous ethnic background facilitates genetic testing

Version: 1 Date: 26 March 2015

Reviewer: Gabriela Balogh

Reviewer's report:

I believe that this manuscript is a good review of the type and number of mutations and polymorphisms found in the BRCA1 / 2 genes for the last 10 years in patients with breast or ovarian cancer Greek origin. I only suggest to explain more clearly which is the routine analysis that every Greek woman should have done to know whether or not carrying a BRCA1 or 2 polymorphisms and their chance for developing the disease. I accept this manuscript with this discretionary revisions.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
