Reviewer’s report

Title: A case report of Muir-Torre syndrome in a woman with breast cancer and MSI-Low skin squamous cell carcinoma

Version: 0 Date: 27 Mar 2017

Reviewer: Rodney Scott

Reviewer’s report:

This brief report details a patient diagnosed with Muir-Torre syndrome. In the background the authors state that EPCAM causes LS. This is not correct and needs a better explanation - loss of EPCAM results in the epigenetic silencing of MSH2 and consequently is associated with LS. After the ages reported in the text "years of age" should be included. The first report of breast cancer in LS was in 2001 and not in 2013.

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?
If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.

I declare that I have no competing interests.
