Reviewer’s report

Title: Exome sequencing characterizes the somatic mutation spectrum of early serrated lesions in a patient with serrated polyposis syndrome (SPS)

Version: 1 Date: 31 Oct 2017

Reviewer: Daniel Buchanan

Reviewer's report:

new sentence in the abstract needs correction..." no established cancer gene or candidate genes related to serrated tumorigenesis were affected" as a suggested alternate new sentence added in the results and discussion..."although the respective genomic regions were covered sufficiently in all polyp-derived DNA" is a non-informative and subjective statement and should be changed to be to say "although the respective genomic regions had a minimum of ??X coverage in all polyp-derived DNA samples tested"
