Reviewer’s report

Title: Central nervous system Gadolinium accumulation in patients undergoing periodical contrast MRI screening for hereditary tumor syndromes

Version: 0 Date: 04 Nov 2017

Reviewer: Finlay Macrae

Reviewer's report:

Important observation.

Please convince me that the exclusion of a control group has not confounded the results. If patients having single scans for other diseases were included randomly in the assessment, that would have been a better design. But I agree the dose/time relationship is convincing given the scans were read blinded to the duration of MR screening.
