Reviewer’s report

Title: Polyglobulia in patients with hemangioblastomas is related to tumor size but not to serum erythropoietin

Version: 0 Date: 03 Mar 2018

Reviewer: Evgeny Imyanitov

Reviewer's report:

This is a very interesting paper, which discusses a relatively rare complication of a relatively rare tumour type. The authors provide fairly justified clinical data indicating that increased level of haemoglobin in patients with hemangioblastomas is related to the large tumor size, but not to the production of EPO. For the understandable reasons, the number of patients is small, however well sufficient for the conclusions given. The paper is well structured and clearly written.
