Reviewer’s report

Title: Serum Selenium Level and Cancer Risk: A Nested Case-Control Study

Version: 0 Date: 27 Nov 2019

Reviewer: Evgeny Imyanitov

Reviewer's report:

This case-control study provides evidence for association between low selenium plasma level and cancer risk. This report is of high interest. Minor comments: Abstract should provide more details regarding the results. I suggest to provide case-control data for each category of selenium plasma levels, otherwise it is not clear why the authors discuss non-linear relationship with cancer risk and why the interval 70-90 ug/L is suggested as the optimal one. The text should be carefully checked (for example, see lines 86-89).
