Reviewer’s report

Title: Development and Validation of Next Generation Sequencing-Based 35-Gene Hereditary Cancer Panel

Version: 0 Date: 12 Sep 2019

Reviewer: Mohammad Reza Akbari

Reviewer's report:

This is a well designed study for validating a laboratory made gene panel testing for hereditary cancer. This is good and necessary for any laboratory that wants to establish such a test, however, it has little value to the scientific community since the accuracy of NGS technology for mutation detection has been already established.
