Title: The Prospective Lynch Syndrome Database reports enable evidence-based personal precision health care

Version: 0 Date: 19 Feb 2020

Reviewer: Jan Lubinski

Reviewer's report:

The submitted manuscript is very valuable and it is extremely important to continue PLSD activities. In my opinion this summarization done by author is well done, although I would like to suggest some improvements:

1. Tables 1 and 2 should present not only percentages by exact numbers.

2. Basing on existing data it cannot be excluded that significant proportion of cancers can be however excluded by polypectomies. This is the question of numbers and time. Data obviously also suggest that large proportion of CRCs can be developed from non-polyposis lesions. Thus, more complex explanation of colorectal carcinogenesis should be at least considered.

3. More profound analysis concerning ovarian cancer in Lynch Syndrome should be presented. I would like to the author to write more about ovarian cancer cases in PLSD.
