Reviewer's report

Title: A Primary Care, EHR-Based Strategy to Promote Safe and Appropriate Drug Use

Version: 2
Date: 24 September 2014

Reviewer: Lawrence Friedman

Reviewer's report:

a) The title should have "EHR" spelled out
b) The Abstract should have information about study size, duration, and the primary outcome measure.
c) There needs to be a section on sample size: Why 600? What assumptions were made in the calculation and why? What outcome was used for the calculation of sample size?
d) There needs to be a section on analysis: Intention to treat or not and why? How will missing data be handled?
e) The "standard care" in the control group should be described.
f) Obviously, this study is unblended. How will objective assessment of the outcomes be ensured?
g) I did not receive the accompanying figures. I may have missed it, but I did not find a reference in the text to figure 1 (figure 2 is mentioned on page 5).
h) In the Trial Status section, when did enrollment begin and when is it expected to finish?
