Reviewer's report

Title: Laser therapy for onychomycosis in patients with diabetes at risk for foot complications: Study protocol of a randomised, double blind controlled trial.

Version: 2 Date: 14 January 2015

Reviewer: Ivan Bristow

Reviewer's report:

Major Compulsory Revisions

Complications in diabetic patients with neuropathy undergoing this type of laser treatment for onychomycosis have been documented previously in the literature (Moutran et al. 2014). As the current study title suggests a "safety" dimension, how will this aspect be managed? This should be documented in the study protocol.

Minor Essential Revisions

In the PCR analysis, the authors may wish to detail how patients with multiple pathogen onychomycosis would be documented / analyzed.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
