Reviewer’s report

Title: Interaction of titanium, zirconia and lithium disilicate with peri-implant soft tissue: study protocol for a randomized controlled trial

Version: 3 Date: 21 September 2015

Reviewer: Leslie Laing

Reviewer's report:

Very minor yet essential revisions should be made:
1) There is still no background information on the specific markers to be tested. Please include a brief explanation as to how they differ from one another.
2) bottom of page 10: "Each...IS..." not "Each...are". Just a grammatical change.

Once these changes have been made, the article will be acceptable.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
