Title: Concomitant, sequential, and 7-day triple therapy in the first-line treatment of Helicobacter pylori infection in Korea: A study protocol for a randomized controlled trial

Version: 0 Date: 29 Aug 2017

Reviewer: Abhai Verma

Reviewer’s report:

It is an important study to find the optimum treatment regimen for eradicating H. pylori in Korean population. I will like to address certain points about this protocol:

1. The duration of triple drug regimen is only 7 days which is less than the recommended 10-14 days.

2. Urea breath test should be done before therapy also.
