Reviewer’s report

**Title:** Adolescent coordinated transition (ACT) to improve health outcomes among young people living with HIV in Nigeria: study protocol for a randomized controlled trial

**Version:** 1  **Date:** 18 Oct 2017

**Reviewer:** Chang Larry

**Reviewer's report:**

The authors have done an acceptable job of responding to comments. I would probably still recommend a statistician double check the sample size/power calculations. One persistent point confusion for me is whether the primary outcome is retention at 12 month, at 24 months (2 primary outcomes), or at 12 months AND at 24 months (one composite primary outcome). Otherwise, I have no further comments at this time.
