Title: Binafuxi Granules in the treatment of common cold with heat syndrome based on traditional Uighur medicine: study protocol for a multicenter randomized controlled trial

Version: 1 Date: 20 Jan 2019

Reviewer: Zehuai Wen

Reviewer's report:

The authors have attended and response all my comments. There is only one minor question.

The SPIRIT is a guidance for reporting a study protocol, not for study procedure. You might describe that "The study protocol comply with the Standard Protocol Items: Recommendations for Interventionsal Trials (SPIRIT)" (Page 9). The author used ANOVA method to estimate sample size with the primary outcome time to fever relief (Page 15) and Kaplan-Meier method was described in statistical analysis (Page 16). Please explain the reason.
