Reviewer’s report:

Thank you for allowing me the opportunity to review your manuscript. Overall, I feel that the study is well-designed and look forward to the results. Below are a few comments/questions:

1) In your Methods/Design section, please provide more information/details about how the I-BiT system measures visual acuity, performs cover testing, and assesses for double vision (page 8, lines 21-23).

2) In your Methods/Design section, the meaning of the final sentence in your Video stimulus section is not clear to me (page 8, line 42). Please clarify.

3) Please further discuss why Groups Two and Three (Strabismus or mixed amblyopia with no previous strabismus surgery and Immediate Post-strabismus surgery) are allowed to have had prior amblyopia treatment whereas Group one is not allowed to have had prior amblyopia treatment (page 9, lines 29-41).
