European survey on national training activities in clinical research

1. Point 2. Methods: Lines from 49 to 51. A reference is made to a "complete/update if needed". It would be interesting a clear explanation about, why the countries would need to update the survey in order to prevent misinterpretations.

2. TABLE 3: The information contained in Table 3 is very disparate. Very poor in some countries and richer in others. It would be interesting to homogenize the information. If information is not available in some countries, it would be better not to include them as part of the table, although the results of the survey from these particular countries, could be taken into account.

General comments:

1. The version of a particular document is only really mentioned in the first page. Version control in clinical trial documentation is often a challenge.

2. The pages have not been numbered.
