Title: Cervicovestibular rehabilitation in Adult with Mild Traumatic Brain injury: A Randomised Controlled Trial Protocol

Version: 1 Date: 02 Oct 2019

Reviewer: Jane McDevitt

Reviewer's report:

Introduction:
I feel the authors did a nice job introducing the primary variables and setting up the primary problem and study.

Methods:
I think the methods are clearly illustrated and explained in solid detail.

Due to the lack of results it is difficult to ascertain the clinical appropriateness of this protocol. Taking it on face value I feel that it is meritorious; however, I would like to see the protocol followed through and evaluate the results and draw a conclusion from a solid discussion based on the studies findings compared to the previously stated reports.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
