Reviewer's report

Title: Large cell neuroendocrine carcinoma of the lung presenting as pseudo achalasia: a case report

Version: 8 Date: 24 November 2014

Reviewer: JAFAR JAFARI

Which of the following best describes what type of case report this is?: An unexpected event in the course of observing or treating a patient

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: No

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: Yes

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

Comments to authors:

The message of this case for clinicians is that manometry should be considered as one of the first steps in assessing dysphagia (when esophageal dysmotility suspected).

there are two typo errors in the abstract:

1- In introduction, para 2, "Malignancy associated pseud-achalasia" o is missing in pseudo.
2- In the last sentence of the conclusion section, "her" should be removed.

Level of interest: An article of importance in its field
Quality of written English: Acceptable
