Reviewer’s report

Title: Magnetic Resonance Tracking of Transplanted Autologous Bone Marrow-Derived Mesenchymal Stromal Cell in Chronic Spinal Cord Injury at Upper Cervical Level: Case Report

Version: 3 Date: 22 September 2014

Reviewer: Bernhard Schaller

Comments to authors:

The article is interesting.

First the authors should clearly state what is really new in this manuscript.

Second, it would be worth to add a table with previously published papers using the same method of spinal stem cell transplantation.

Third, in such a Setting molecular Imaging is essential. At least the authors should mention this method in the discussion and cite the corner-Stone articles (Methods Mol Biol. 2013;1052:195-201; Stem Cell Rev. 2012 Dec;8(4):1265-6).

Level of interest: An article of importance in its field
