Reviewer’s report

Title: A presenting with bleeding and thrombosis in a patient with primary antiphospholipid syndrome using Norethisterone a case report

Version: 2 Date: 13 November 2014

Reviewer: Henry Smithson

Which of the following best describes what type of case report this is?: Unexpected or unusual presentations of a disease

Has the case been reported coherently?: No

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: Yes

Does the case report have explanatory value?: Yes

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: No

Is the anonymity of the patient protected?: Yes

Comments to authors:

The paper reports an interesting case and the initial paper is well written considering it is written in a second language. However, the text should be edited and re-written by a native English speaker.

The report focuses on the investigations during the hospital stay but more information on the treatment prescribed to maintain good health would be of interest.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being
published

Declaration of competing interests:

No conflict of interest
