Reviewer’s report

**Title:** Opsoclonus-myoclonus syndrome associated with a nasopharyngeal tumour in an adult: Case Report

**Version:** 4  **Date:** 12 March 2015

**Reviewer:** Adel El-Naggar

Which of the following best describes what type of case report this is?: None

Has the case been reported coherently?: Yes

Is the case report authentic?: Yes

Is the case report ethical?: Yes

Is there any missing information that you think must be added before publication?: Yes

Is this case worth reporting?: Yes

Is the case report persuasive?: No

Does the case report have explanatory value?: No

Does the case report have diagnostic value?: No

Will the case report make a difference to clinical practice?: Yes

Is the anonymity of the patient protected?: Yes

**Comments to authors:**

A case report of a rare syndrome in a patient with NPC.

The following are main comments:

1. The EBV status is not reported. This is a bit odd considering the multitude of the markers performed. The authors are required to address this. Issue.

2. The case history and the markers description should be reduced.

3. The figures are too many for a case report.

**Level of interest:** An article whose findings are important to those with closely
related research interests
