Reviewer’s report

Title: Mesh penetrating the cecum and bladder following inguinal hernia surgery: a case report

Version: 2 Date: 15 Jul 2017

Reviewer: Gabriele Bellio

Reviewer’s report:

I congratulate with the authors for the improvements they obtained. However, there are some issues I have to address:

- You have to report the fact that you administer antibiotics to the patient (which one you used, for how long, why...)

- You wrote "[...] but the patient felt left testicular pain 2 days before surgery, and echocardiography revealed swelling of the left epididymis". You performed testicular ultrasound, not echocardiography since echocardiography is a sonogram of the heart. Please, correct it.

- I think it would be better if you explain in the text why you performed a temporary bladder fistula. I believe that epididymitis is not a sufficient reason.

Level of interest
Please indicate how interesting you found the manuscript:
