Title: Medication adherence influencing factors – an (updated) overview of systematic reviews

Version: 0 Date: 31 Dec 2018

Reviewer: Narothama Aeedula

Reviewer's report:

Mathes et al., have performed a systematic review of Systematic Reviews to identify factors that can influence adherence of adult patients with physical chronic diseases.

Overall the study design, methods and discussion is well written.

Here are some of my suggestions and comments to the authors.

1. The title is confusing. What does the authors mean by the overview(update). Why not a systematic review? Also consider to include the wording medication adherence.

3. Please specify the age limits instead of adults and children in the manuscript inclusion and exclusion criteria.

2. The authors should include other language literature. Though mentioned as a limitation, in this day and age there are many tools available to translate the manuscripts from other languages
