Reviewer's report

Title: Effects of aerobic exercise in the treatment of older adults patients with chronic musculoskeletal pain: a protocol of a systematic review

Version: 0 Date: 14 May 2019

Reviewer: Tirza Z. Tamin

Reviewer's report:

1. It would be better if you limit the period of searching on databases, so that it would be more exact and clear. Because the recent one will be more up to date.

2. How about the ethical clearance/approval? Since there were human involvement, it would be best if it includes the ethical approval

3. In the 55th line, where does the prevalence apply? Globally or in your country?

4. There should be a swap for the third sentence of the first paragraph in the background with the first sentence of the second paragraph of the background.

5. Is there any criteria of the settings of the studies? Or it could be in any medical facilities? It should be mentioned.

6. In line 128, it would be better to have a proceeding sentence like "The outcomes will be classified into three periods" then you can start mentioning how you classified it into short, medium, and long term.

Level of interest
Please indicate how interesting you found the manuscript:

An article whose findings are important to those with closely related research interests

Quality of written English
Please indicate the quality of language in the manuscript:
