Title: Monitoring Neurocognitive Functioning in Childhood Cancer Survivors: Evaluation of CogState Computerized Assessment and the Behavior Rating Inventory of Executive Function

Version: 0 Date: 12 Dec 2018

Reviewer: Pinki Prasad

Reviewer's report:

This is a well written paper. As the number of pediatric cancer survivors increases it is important to have easy and quick administered monitoring tool, particularly in resource-limited communities, to identify those patients in need of comprehensive neurocognitive assessment. These results indicate that using either the BRIEF-MCI or CogState Composite as the sole measures to identify patients at risk for neurocognitive problems may miss patients in need.

Limitations do include the fact that this study was done at one institution located in a large metropolitan area; generalizability to other populations needs to be discussed further as does how these measures can be used in smaller institutions with less resources.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
