Reviewer's report

Title: Effect of Pegylated Phosphatidylserine-Containing Liposomes in Experimental Chronic Arthritis

Version: 2 Date: 20 April 2015

Reviewer: Jerrie S Refuerzo

Reviewer's report:

Major Compulsory Revisions- none

Minor Essential Revisions-
- This is an important study that is well thought out and designed to answer an important question regarding the use of Pegylated PS liposomes for collagen induced chronic arthritis.
- Although they provide compelling evidence that this could be a potential treatment based on the literature, they did not detect such findings.
- Abstract- There are a few grammatical errors in the conclusion of the abstract in sentence 1 and 2.
- Under Materials and Methods, Clinical Score section, was the subjective analysis of the clinical severity score blinded? Who did the scoring?
- In the tables, please spell out abbreviations
- In the tables, for the p-values, please consider limiting the decimal places to just a few (no more than 4).

Discretionary Revisions- none

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
